Module 5
Node and web

Outline

- Understanding http module

- Creating simple web server

HTTP - Official Site Says

- The HTTP interfaces in Node.js are designed to support many features of the protocol which have been traditionally difficult to use

HTTP - a low level API

- The http module is very low-level - creating a complex web application using the snippet above is very time-consuming

```
http.Agent              http.Client             http.ClientRequest      http.IncomingMessage    http.METHODS
http.OutgoingMessage    http.STATUS_CODES       http.Server             http.ServerResponse     http._connectionListener
http.createClient       http.createServer       http.get                http.globalAgent        http.request
```

Check your knowledge

- Http is high level module, true or false?

- Name the function used to create http server?
